

## Supplementary questions

(These are to be answered in the numbered questions on the back of the main mark-sense form, *not on the yellow form*. Use the letters on a scale of A = agree strongly, through G = disagree strongly.)

1. The text was useful.
2. The text was good.
3. The course was too concentrated on theory. There should have been much more discussion of data.
4. The course should have exams instead of homeworks.
5. The computer simulation program was helpful.
6. The homeworks should have been more challenging.
7. The availability of the audio recordings of lectures was helpful.
8. Lectures based on projections would have been better for me than having Joe write on the board in “chalk-talk” format.
9. The course covered the material too quickly.
10. I really don’t need to know this material.
11. I already knew most of this material.
12. The course should have concentrated on how to use programs that analyze population-genetic data instead of on the theory.
